Project Name	Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits
Maximum Marks	4 Marks

Empathy Map

The empathy map helps understand the needs, expectations, and behaviour of users involved in the food ordering process. It focuses on how users think, feel, say, and act while using food delivery services. By analyzing these perspectives, the project identifies customer preferences, delivery challenges, and business opportunities. These insights support better decision-making, improve customer satisfaction, and optimize operational efficiency using Tableau dashboards.

SAYS • I want my food delivered quickly • Reasonable prices and offers encourage me to order more. • I prefer ordering from restaurants with good ratings	THINKS • "Will my order arrive on time?" • "Quality of food?" • "Which cuisine offers the best value for money?"
DOES • Orders food mainly during lunch and dinner hours. • Compares restaurants, prices, and delivery times before placing an order. • Uses discounts and promotional offers while ordering.	FEELS • Happy when food is delivered on time and is of good quality. • Frustrated when deliveries are delayed or orders are incorrect • Satisfied when the app provides multiple cuisine options and a smooth ordering experience.
